AUTHOR INDEX

Volume 116, 117, 118, and 119, 1999

A

ABID, M., WU, M. S., LIU, J. B., RONNEY, P. D., UEKI, M., MARUTA, K., KOBAYASHI, H., NIIOKA, T., V., and ANZANDT, D. M.
Experimental and Numerical Study of Flame Ball IR and UV Emissions, 116:348

AGARWAL, A.: see Arpaci, V. S.

AGGARWAL, S. K.: see Azzoni, R.

AGGARWAL, S. K.: see Shu, Z.

AGRAWAL, A. K.: see Albers, B. W.

AHO, M.: see Gurgel Veras, C. A.

ALBERS, B. W., and AGRAWAL, A. K.
Schlieren Analysis of an Oscillating Gas–Jet Diffusion Flame, 119:84

ALDUSHIN, A. P., RUMANOV, I. E., and MATKOWSKY, B. J.
Maximal Energy Accumulation in a Superadiabatic Filtration Combustion Wave, 118:76

ALTENKIRCH, R. A.: see Wolverton, M. K.

AMAGAI, K.: see Arai, M.

ANCIA, R., VAN TIGGELEN, P. J., and VANDOOREN, J.
Gas Chromatography as a Complementary Analytical Technique to Molecular Beam Mass Spectrometry for Studying Flame Structure, 116:307

ANDERSON, K. R., MAHALINGHAM, S., and HERTZBERG, J.
Two–Dimensional Planar Computational Investigation of Flame Broadening in Confined Non–Premixed Jets, A, 118:233

ANDERSON, W. R.
Heats of Formation of HNO and Some Related Species, 117:394

ANTHENIEN, R. A.: see Tse, S. D.

AOKI, H.: see Hayashi, S.

ARAI, M.: see Saito, M.

ARAI, M., SATO, H., and AMAGAI, K.
Gravity Effects on Stability and Flickering Motion of Diffusion Flames, 118:293

ARAI, T.: see Saito, M.

ARENA, U.: see Mastellone, M. L.

ARFI, P.: see Veyssiere, B.

ARPACI, V. S., and AGARWAL, A.
Scaling Laws of Turbulent Ceiling Fires, 116: 84

ASAKUMA, Y.: see Hayashi, S.

ATAKAN, B.: see Löwe, A. G.

AUNG, K. T.: see Kwon, O. C.

AZZONI, R., RATTI, S., AGGARWAL, S. K., and PURI, I. K.
Structure of Triple Flames Stabilized on a Slot Burner, The, 119:23

B

BABUSHOK, V.: see Rumminger, M. D.

BAKROSIS, A. G., PAPAILIOU, D. D., and KOUTMOS, P.
Study of the Turbulent Structure of a Two–Dimensional Diffusion Flame Formed Behind a Slender Bluff–Body, A, 119:291

BANDEIRA DE MELO, G.: see Schulz, H.

BARBELLA, R.: see Tregrossi, A.

BARLOW, R.S., SMITH, N.S.A., CHEN, J.-Y., and BILGER, R.W.
Nitric Oxide Formation in Dilute Hydrogen Jet Flames: Isolation of the Effects of Radiation and Turbulence–Chemistry Submodels, 117:4

BEAUD, P.: see Radi, P. P.

BECHTOLD, J. K., and MATALON, M.
Effects of Stoichiometry on Stretched Premixed Flames, 119:217

BÉDAT, B., EGOLFOPOLOUS, F. N., and POINSOT, T.
Direct Numerical Simulation of Heat Release and NO_x Formation in Turbulent Nonpremixed Flames, 119:69

BÉDAT, B.: see Cheng, R. K.

BENNETT, P. J.: see Gregory, D.

BENZ, P.: see Dogwiler, U.

BENZ, P.: see Mantzaras, J.

BILGER, R. W.
Comment and Reply on the "Assessment of Combustion and Submodels for Turbulent Nonpremixed Hydrocarbon Flames", 116: 675

BILGER, R. W.: see Barlow, R. S.

BILGER, R. W.: see Frank, J. H.

BILGER, R. W.: see Swaminathan, N.

BLAKE, T. R., and COTE, J. B.
Mass Entrainment, Momentum Flux, and Length of Buoyant Turbulent Gas Diffusion Flames, 117:589

BLEVINS, L. G., and GORE, J. P.
Computed Structure of Low Strain Rate Partially Premixed CH_4/Air Counterflow Flames: Implications for NO Formation, 116:546

BLEVINS, L. G., RENFRO, M. W., LYLE, K. H., LAURENDEAU, N. M., and GORE, J. P.
Experimental Study of Temperature and CH Radical Location in Partially Premixed CH_4/Air Coflow Flames, 118:684
BONN, B.: see Joutsenoja, T.
BOULANGER, B.: see Lockett, R. D.
BOUMA, P. H., and DE GOEY, L. P. H.
Premixed Combustion on Ceramic Foam Burners, 119:133
BOURGUIGNON, E., JOHNSON, M. R., and KOSTIUK, L. W.
Use of a Closed–Loop Wind Tunnel for Measuring the Combustion Efficiency of Flames in a Cross Flow, The, 119:319
BRAND, J.: see Löwe, A. G.
BRAY, K. N. C., CHAMPION, M., and LIBBY, P. A.
Premixed Combustion in Laminar Couette Flow: Extinction and Mass Burning Rate, 118:633
BRAY, K. N. C.: see Kīoni, P. N.
BRAY, K. N. C.: see Kostiuk, L. W.
BRAY, K. N. C.: see Zhang, Y.
BREWSTER, B. S.: see Cannon, S. M.
BROOKES, S. J., and MOSS, J. B.
Measurements of Soot Production and Thermal Radiation from Confined Turbulent Jet Diffusion Flames of Methane, 116:49
BROOKES, S. J., and MOSS, J. B.
Predictions of Soot and Thermal Radiation Properties in Confined Turbulent Jet Diffusion Flames, 116:486
BROWN, C. J., and THOMAS, G. O.
Experimental Studies of Shock–Induced Ignition and Transition to Detonation in Ethylene and Propane Mixtures, 117:861
BROWN, M. J., SMITH, D. B., and TAYLOR, S. C.
Influence of Uncertainties in Rate Constants on Computed Burning Velocities, 117:652
BROWN, R. C.: see Zhou, W.
BRUEL, P.: see Karmed, D.
BUCHER, P., YETTER, R. A., DRYER, F. L., VICENZI, E. P., PARR. T. P., and HANSON-PARR, D. M.
Condensed–Phase Species Distributions About A1 Particles Reacting in Various Oxidizers, 117:351
BUCKMASTER, J., JACKSON, T. L., and YAO, J.
Elementary Discussion of Propellant Flame Geometry, An, 117:541
BUI, P.-A., VLACHOS, D. G., and WESTMORELAND, P. R.
On the Local Stability of Multiple Solutions and Oscillatory Dynamics of Spatially Distributed Flames, 117:307
BURGESS, C. P., and LAWN, C. J.
Premixture Model of Turbulent Burning to Describe Lifted Jet Flames, The, 119:95
BURTON, R. L.: see Foelsche, R.O.

Acoustic Effects During the Combustion of Gaseous Fuels in a Bubbling Fluidized Bed, 117:629

SUBJECT INDEX

Volumes, 114, 115, 116, 117, 118, 119, 1999

1. ASYMPTOTIC ANALYSES
- Algorithm for the Construction of Global Reduced Mechanisms with CSP Data, An, 117:685
- Catalytic Ignition of Dry Carbon Monoxide in a Stagnation–point Flow, 119:505
- Effects of Stoichiometry on Stretched Premixed Flames, 119:217
- Premixed Combustion in Laminar Couette Flow: Extinction and Mass Burning Rate, 118:633

2. COMBUSTION IN PRACTICAL SYSTEMS
- Acoustic Effects During the Combustion of Gaseous Fuels in a Bubbling Fluidized Bed, 117:629
- Carbon Attrition During the Circulating Fluidized Bed Combustion of a Packaging–Derived Fuel, 117:562
- Displacement Effects and Scaling of Ducted, Supersonic Flames, 116:593
- Effect of Postflame Injection of Fuel on the Destruction of Chlorinated Hydrocarbons and the Oxidation of NO, 119:154
- Effects of Unsteady Stretch on Spark–Ignited Flame Kernel Survival, 118:469
- Effects of a Recess on Cryogenic Flame Stabilization, 118:327
- Experimental Investigation of Blow–Out Limits for Hydrogen–Diluent Diffusion Flames, An, 117:438
- Isolation of Diesel–Fuel Ignition Inhibitors in Reverse Micelles, 119:195
- Modeling Nitric Oxide Formation in a Drop Tube Furnace Burning Pulverized Coal, 118:61
- NO Formation in the Burnout Region of a Partially Premixed Methane–Air Flame with Upstream Heat Loss, 118:733
- Shell Autoignition Model: A New Mathematical Formulation, The, 117:529
- Structure and Stability of the Laminar Counter–flow Partially Premixed Methane/Air Triple Flame, 119:109
- Study of the Chemical and Physical Processes Governing CO_2 Laser–Induced Pyrolysis and Combustion of RDX, 117:600
- Two–Dimensional Modelling for Catalytically Stabilized Combustion of a Lean Methane–Air Mixture with Elementary Homogeneous and Heterogeneous Chemical Reactions, 116:243
- Volatile Organic Compounds and Particulates as Components of Diesel Engine Exhaust Gas, 118:179

3. COMBUSTION STABILITY/INSTABILITY
- Combustion of Ammonium Dinitramide, 117:429
- Role of Landau-Darrieus Instability in Large Scale Flows, The, 117:155
- Study of the Chemical and Physical Processes Governing CO_2 Laser–Induced Pyrolysis and Combustion of RDX, A, 117:600

4. COMBUSTION SYSTEMS: ANALYTIC AND NUMERICAL DESCRIPTIONS
- Accounting for Reactant Consumption in the Thermal Explosion Problem. Part IV. Numerical Solution of the Arrhenius Problem, 117:422
- Analysis and Numerical Simulation of a Nonpremixed Flame in a Corner, 118:221
- Analysis of the Contribution of Curvature to Premixed Flame Propagation, 118:308
- Analytical Solution for the Quasi–Steady Droplet Combustion, An, 116:302
- Assessment of Combustion Submodels for Turbulent Nonpremixed Hydrocarbon Flames, 116:519
- Asymptotic and Numerical Investigation of Homogeneous Ignition in Catalytically Stabilized Channel Flow Combustion, An, 119:455
- Attachment of the Flame Sheet to the Carbon Surface in a Carbon Combustion Model: On the Combustion Rate, The, 118:697
- Chemical Response of Methane/Air Diffusion Flames to Unsteady Strain Rate, 118:204
- Chemistry of Pre-ignition of n-Pentane and 1-Pentene, The, 118:213
- Classification of Combustion Regimes in a Packed Bed of Particles Based on the Relevant Time and Length Scales, 116:297

UMI

INCORRECT VOLUME NUMBERS, SHOULD READ VOLUMES 116, 117, 118, 119, 1999.

Combined Effects of Radiation, Flame Curvature, and Stretch on the Extinction and Bifurcations of Cylindrical CH_4/Air Premixed Flame, 116:580
Comment and Reply on the "Assessment of Combustion and Submodels for Turbulent Nonpremixed Hydrocarbon Flames," 116: 675
Comparison of Mixing Model Performance for Nonpremixed Turbulent Reactive Flow, 117:732
Computational and Experimental Study of Soot Formation in a Coflow, Laminar Diffusion Flame, 117:117
Computed Structure of Low Strain Rate Partially Premixed CH_4/Air Counterflow Flames: Implications for NO Formation, 116:546
Detailed Numerical Simulation of Flame Ball Structure and Dynamics, 116:387
Differential Diffusion in Turbulent Reacting Flows, 117:493
Direct Numerical Simulation of Heat Release and NO_x Formation in Turbulent Nonpremixed Flames, 119:69
Dynamics and Structure of Dusty Reacting Flows: Inert Particles in Strained, Laminar, Premixed Flames, 117:206
Effects of Stoichiometry on Stretched Premixed Flames, 119:217
Evaluation of Flame Surface Density Models for Turbulent Premixed Jet Flames, An, 116:1
Experimental Analysis of Flame Surface Density Modeling for Premixed Turbulent Combustion Using Aqueous Autocatalytic Reactions, 118:606
Experimental and Numerical Studies of a Triple Flame, 116:192
Experimental and Numerical Study of Flame Ball IR and UV Emissions, 116:348
Formation and Evolution of Two–dimensional Cellular Detonations, 116:154
Fundamental Mechanisms in Premixed Turbulent Flame Propagation Via Flame–Vortex Interactions, Part II: Numerical Simulation, 118:557
Heat Flux from a Diffusion Flame Leading Edge to an Adjacent Surface, 118:651
Interaction of a Shock with a Sinusoidally Perturbed Flame, 117:99
Investigation of Catalytic Combustion Within a Fin Boundary Layer, 118:3
Maximal Energy Accumulation in a Superadiabatic Filtration Combustion Wave, 118:76
Mechanism of Two–Dimensional Pocket Formation in Lean Premixed Methane–Air Flames with Implications to Turbulent Combustion, The, 116:15
Modeling of Premixed Turbulent Flames with Second Moment Methods, 116:461
Numerical Analyses for Downward Flame Spread over Thin anf Thick Fuels in a Gravitational Field, 118:744
Numerical Analysis of Laminar Combustion of Fuel Gas Clouds, 118:669
Numerical Simulation of Deflagration–to–Detonation Transition: The Role of Shock–Flame Interactions in Turbulent Flames, 117:323
Numerical Simulation of Detonation Initiation in a Flame Brush: The Role of Hot Spots, 119:400
Numerical Study of the Inhibition of Premixed and Diffusion Flames by Iron Pentacarbonyl, 116:207
On Diffusion Flame Attachment Near Cold Surfaces, 117:384
On the Local Stability of Multiple Solutions and Oscillatory Dynamics of Spatially Distributed Flames, 117:307
Oxidation of Neopentane in a Jet–Stirred Reactor from 1 to 10 ATM: An Experimental and Detailed Kinetic Modeling Study, 118:191
PDF Simulations of Turbulent Combustion Incorporating Detailed Chemistry, 117:340
Predictions of Soot and Thermal Radiation Properties in Confined Turbulent Jet Diffusion Flames, 116:486
Premixed Combustion in Laminar Couette Flow: Extinction and Mass Burning Rate, 118:633
Premixed Combustion on Ceramic Foam Burners, 119:133
Pressure Change and Transport Process on Flames Formed in a Stretched, Rotating Flow, 118:431
Rate–Ratio Asymptotic Analysis of Methane—Air Diffusion–Flame Structure for Predicting Production of Oxides of Nitrogen, 117:441

Role of Landau-Darrieus Instability in Large Scale Flows, The, 117:155
Simplified, Fundamentally Based Method for Calculating NO_x Emissions in Lean Premixed Combustors, A, 119:367
Solution to the Dusty Gas Explosion Problem with Reactant Consumption. Part I: The Adiabatic Case, 119:189
Structure and Propagation of Triple Flames in Partially Premixed Hydrogen–Air Mixtures, 119:436
Structure of Triple Flames Stabilized on a Slot Burner, The, 119:23
Study of the Chemical and Physical Processes Governing CO_2 Laser–Induced Pyrolysis and Combustion of RDX, A, 117:600
Three–dimensional Computation of Heat Transfer from Flames Between Verticle Parallel Walls, 117:574
Two–Dimensional Large Eddy Simulation of Soot Formation in the Near–Field of a Strongly Radiating Nonpremixed Acetylene–Air Turbulent Jet Flame, 119: 121
Two–Dimensional Modelling for Catalytically Stabilized Combustion of a Lean Methane–Air Mixture with Elementary Homogeneous and Heterogeneous Chemical Reactions, 116:243
Two–Dimensional Planar Computational Investigation of Flame Broadening in Confined Non–Premixed Jets, A, 118:233

5. COMBUSTION SYSTEMS: MODELING AND SCALING
Classification of Combustion Regimes in a Packed Bed of Particles Based on the Relevant Time and Length Scales, 116:297
Combustion and Heat Transfer in Model Two–Dimensional Porous Burners, 116:177
Combustion of Two–phase Hydrocarbon Fuel Clouds Released into the Atmosphere, 118:583
Comment on "Approximations for Burning Velocities and Markstein Numbers for Lean Hydrocarbon and Methanol Flames," by U. C. Müller, M. Bollig, and N. Peters, 116:310
Detailed Analysis of Low-Pressure Premixed Flames of $CH_4 + O_2 + N_2$: A Study of Prompt-NO, 117:291
Dynamics of Weakly Stretched Flames: Quantitative Description and Extraction of Global Flame Parameters, 118:108
Elementary Discussion of Propellant Flame Geometry, An, 117:541
Evaluation of Combined Flame Surface Density and Mixture Fraction Models for Nonisenthalpic Premixed Turbulent Flames, An, 117:514
Flow Reactor Study of Neopentane Oxidation at 8 Atmospheres: Experiments and Modeling, A, 118:415
Gravity Effects on Steady Two–Dimensional Partially Premixed Methane–Air Flames, 118:91
Heat Capacity and Thermal Conductivity Considerations for Coal Particles During the Early Stages of Rapid Heating, 116:94
Ignition of Ethane, Propane, and Butane in Counterflow Jets of Cold Fuel versus Hot Air Under Variable Pressures, 117:777
Implementing Multi–Step Chemical Kinetics Models in Opposed–Flow Flame Spread Over Cellulose and a Comparison to Single–Step Chemistry, 118:281
Kinetics Modeling of Shock-Induced Ignition in Low-Dilution CH_4/O_2 Mixtures at High Pressures and Intermediate Temperatures, 117:272
Mass Entrainment, Momentum Flux, and Length of Buoyant Turbulent Gas Diffusion Flames, 117:589
Modeling Nitric Oxide Formation in a Drop Tube Furnace Burning Pulverized Coal, 118:61
Modeling of Filtration Combustion in a Packed Bed, 117:8 32
Numerical Modeling of Isolated n-Alkane Droplet Flames: Initial Comparisons with Ground and Space–Based Microgravity Experiments, 116:432
Oxidation of Neopentane in a Jet–Stirred Reactor from 1 to 10 ATM: An Experimental and Detailed Kinetic Modeling Study, 118:191
PDF Modeling of Lean Premixed Combustion Using *In Situ* Tabulated Chemistry, 119: 233
Phase Segregation Effects on the Calculation of ODTX in HMX Spheres, 117:657
Prediction of NO_x Control by Basic and Advanced Gas Reburning Using the Two–Stage Lagrangian Model, 119:483

Premixture Model of Turbulent Burning to Describe Lifted Jet Flames, The, 119:95
Scaling Laws of Turbulent Ceiling Fires, 116: 84
Seeding of Methane Oxydation, 119:182
Shock–Tube and Modeling Study of Ethylene Pyrolysis and Oxidation, 117:755
Studies of Premixed Flame Propagation in Explosion Tubes, 116:504
Variation of Equivalence Ratio and Element Ratios with Distance from Burner in Premixed One–Dimensional Flames, 116: 605

6. COMBUSTION SYSTEMS: NEW
Numerical Simulation of Deflagration–to–Detonation Transition: The Role of Shock–Flame Interactions in Turbulent Flames, 117:323

7. DETONATIONS: CONDENSED PHASE AND HETEROGENEOUS
Combustion of Ammonium Dinitramide, 117: 429
Detonations of Starch Suspensions in Gaseous O_2/N_2 and Stoichiometric H_2/O_2 Mixtures, 117:477

8. DETONATIONS: GAS PHASE
Experimental Studies of Shock–Induced Ignition and Transition to Detonation in Ethylene and Propane Mixtures, 117:861
Flame Dynamics in a Vented Vessel Connected to a Duct: 2. Influence of Ignition Site, Membrane Rupture, and Turbulence, 116:272
Formation and Evolution of Two–dimensional Cellular Detonations, 116:154
Numerical Simulation of Detonation Initiation in a Flame Brush: The Role of Hot Spots, 119:400

9. DIAGNOSTICS: LASER
Can Soot Primary Particle Size Be Determined Using Laser–Induced Incandescence?, 116:291
Droplet Lasing Spectroscopy Applied to Droplet Stream Flames, 117:413
Dynamic Light Scattering in Sooting Premixed Atmospheric–Pressure Methane–, Propane–, Ethene–, and Propene–Oxygen Flames, 118:140
Effects of a Recess on Cryogenic Flame Stabilization, 118:327
Highly Strained Turbulent Rich Methane Flames Stabilized by Hot Combustion Products, 116:136
Investigating a Methanol Spray Flame Interacting with an Annular Air Jet Using Phase–Doppler Interferometry and Planar Laser–Induced Fluorescence, 117:661
Investigations of Heat Release, Extinction and Time Evolution of the Flame Surface, for a Nonpremixed Flame Interacting with a Vortex, 117:189
Large Scale Turbulent Structure of Nonpremixed Planar Jet Flames, The, 116: 615
Laser–Saturated Fluorescence Measurements of Nitric Oxide in an Inverse Diffusion Flame, 116:282
Measurements of Conditional Velocities in Turbulent Premixed Flames by Simultaneous OH PLIF and PIV, 116:220
Premixed Combustion on Ceramic Foam Burners, 119:133
Structure and Stability of the Laminar Counter–Flow Partially Premixed Methane/ Air Triple Flame, 119:109
Study of Pollutant Emission Characteristics of Partially Premixed Turbulent Jet Flames, A, 116:627
Study of the Turbulent Structure of a Two–Dimensional Diffusion Flame Formed Behind a Slender Bluff–Body, A, 119:291

10. DIAGNOSTICS: OPTICAL AND PHOTOGRAPHIC
Coupled Dipole Calculation of Extinction Coefficient and Polarization Ratio for Smoke Agglomerates, 119:56
Dynamic Light Scattering in Sooting Premixed Atmospheric–Pressure Methane–, Propane–, Ethene–, and Propene–Oxygen Flames, 118:140
Experimental Analysis of Flame Surface Density Modeling for Premixed Turbulent Combustion Using Aqueous Autocatalytic Reactions, 118:606
Propagation of Unsteady Tribrachial Flames in Laminar Non–premixed Jets, 118:151
Pyrometric Temperature and Size Measurements of Burning Coal Particles in a Fluidized Bed Combustion Reactor, 118: 707

Schlieren Analysis of an Oscillating Gas–Jet Diffusion Flame, 119:84
Soot Formation in Cracked Flames, 117:435

11. DIAGNOSTICS: OTHER
Application of Ultrasonic Tomographic Imaging to Study Smoldering Combustion, An, 116:120
Combustion Mechanism of an RDX–Based Composite Propellant, 118:248
Diamond Deposition in Low–Pressure Acetylene Flames: *In Situ* Temperature and Species Concentration Measurements by Laser Diagnostics and Molecular Beam Mass Spectrometry, 118:37
Gas Chromatography as a Complementary Analytical Technique to Molecular Beam Mass Spectrometry for Studying Flame Structure, 116:307
Volatile Organic Compounds and Particulates as Components of Diesel Engine Exhaust Gas, 118:179

12. EXPERIMENTAL TECHNIQUES OR RESULTS: BURNERS
Absolute Concentration Measurements Using DFWN and Modeling of OH and S_2 in a Fuel–Rich H_2/Air/SO_2 Flame, 118:301
Characteristic Flow Modes of Wake-Stabilized Jet Flames in a Transverse Air Stream, 117:59
Characterization of Impinging Jet Flames, 116:671
Combustion of Benzene in Rich Premixed Flames at Atmospheric Pressure, The, 117:553
Comparison of Non-Fuel Hydrocarbon Concentrations Measured in Coflowing Nonpremixed Flames Fueled with Small Hydrocarbons, 117:362
Comparison of Saturated and Linear Laser–Induced Fluorescence Measurements of Nitric Oxide in Counterflow Diffusion Flames, 117:810
Control of Soot Emission of a Turbulent Diffusion Flame by DC or AC Corona Discharges, 116:653
Displacement Effects and Scaling of Ducted, Supersonic Flames, 116:593
Droplet Lasing Spectroscopy Applied to Droplet Stream Flames, 117:413
Effect of Global Equivalence Ratio and Postflame Temperature on the Composition of Emissions from Laminar Ethylene/Air Diffusion Flames, The, 118:521
Effect of Swirl on Lifted Flame Characteristics in Nonpremixed Jets, 117:636
Effects of Buoyancy on Lean Premixed V-Flames Part I: Laminar and Turbulent Flame Structures, 116:360
Experimental Study of Nonfuel Hydrocarbon Concentrations in Coflowing Partially Premixed Methane/Air Flames, 118:619
Experimental Study of Premixed Turbulent Combustion in Opposed Streams. Part III—Spatial Structure of Flames, 118:129
Experimental Study of Temperature and CH Radical Location in Partially Premixed CH_4/Air Coflow Flames, 118:684
Experimental and Numerical Studies of a Triple Flame, 116:192
Flame Extinction Limits in CH_2F_2/Air Mixtures, 118:25
Formation Mechanism of Polycyclic Aromatic Hydrocarbons and Fullerenes in Premixed Benzene Flames, 119:1
Formation of Polycyclic Aromatic Hydrocarbons in an Atmospheric Pressure Ethylene Diffusion Flame, 118:500
Fuel Preheat Effects on Soot–Field Structure in Laminar Gas Jet Diffusion Flames Burning in O-g and 1-g, 116:334
Fundamental Mechanisms in Premixed Turbulent Flame Propagation Via Flame–Vortex Interactions, Part I: Experiment, 118:537
Gas Chromatography as a Complementary Analytical Technique to Molecular Beam Mass Spectrometry for Studying Flame Structure, 116:307
Gravity Effects on Stability and Flickering Motion of Diffusion Flames, 118:293
Gravity Effects on Steady Two–Dimensional Partially Premixed Methane–Air Flames, 118:91
Highly Strained Turbulent Rich Methane Flames Stabilized by Hot Combustion Products, 116:136
Inhibition of Nonpremixed Flames by Phosphorous–Containing Compounds, 116:166
Intermediate Species Profiles in Low Pressure Premixed Flames Inhibited by Fluoromethanes, 117:709

Investigations of Heat Release, Extinction and Time Evolution of the Flame Surface, for a Nonpremixed Flame Interacting with a Vortex, 117:189
Kinetic Model for the Decomposition of DMMP in a Hydrogen/Oxygen Flame, 117:78
Large Scale Turbulent Structure of Nonpremixed Planar Jet Flames, The, 116:615
Laser–Saturated Fluorescence Measurements of Nitric Oxide in an Inverse Diffusion Flame, 116:282
Measurements of Conditional Velocities in Turbulent Premixed Flames by Simultaneous OH PLIF and PIV, 116:220
Morphology of Chromium Emissions from a Laminar Hydrogen Diffusion Flame, 116:233
NO_x Formation in Two–Stage Methane–Air Flames, 118:399
NO Formation in the Burnout Region of a Partially Premixed Methane–Air Flame with Upstream Heat Loss, 118:733
Observations on the Leading Edge in Lifted Flame Stabilization, 119:199
On the Oscillatory Behavior of Laminar Spray Diffusion Flames: Experiment and Theory, 117:373
Premixed Combustion on Ceramic Foam Burners, 119:133
Propagation of Unsteady Tribrachial Flames in Laminar Non–premixed Jets, 118:151
Reactions of Sodium Species in the Promoted SNCR Process, 117:821
Scalar and Velocity Field Measurements in a Lifted CH_4–Air Diffusion Flame, 117:257
Schlieren Analysis of an Oscillating Gas–Jet Diffusion Flame, 119:84
Shapes of Buoyant and Nonbuoyant Laminar Jet Diffusion Flames, 116:376
Shapes of Nonbuoyant Round Luminous Hydrocarbon/Air Laminar Jet Diffusion Flames, 116:415
Structure of Triple Flames Stabilized on a Slot Burner, The, 119:23
Study of Pollutant Emission Characteristics of Partially Premixed Turbulent Jet Flames, A, 116:627
Study of the Chemical and Physical Processes Governing CO_2 Laser–Induced Pyrolysis and Combustion of RDX, A, 117:600
Study of the Turbulent Structure of a Two–Dimensional Diffusion Flame Formed Behind a Slender Bluff–Body, A, 119:291
Use of a Closed–Loop Wind Tunnel for Measuring the Combustion Efficiency of Flames in a Cross Flow, The, 119:319

13. EXPERIMENTAL TECHNIQUES OR RESULTS: PLUG FLOW REACTORS
Flow Reactor Study of Neopentane Oxidation at 8 Atmospheres: Experiments and Modeling, A, 118:415
Propene Pyrolysis and Oxidation Kinetics in a Flow Reactor and Laminar Flames, 119:375

14. EXPERIMENTAL TECHNIQUES OR RESULTS: QUASI-STATIC VESSELS
Diamond Deposition in Low–Pressure Acetylene Flames: *In Situ* Temperature and Species Concentration Measurements by Laser Diagnostics and Molecular Beam Mass Spectrometry, 118:37
Experimental and Numerical Study of Flame Ball IR and UV Emissions, 116:348
Study of the Gas-Phase Chemical Structure During CO_2 Laser Assisted Combustion of HMX, A, 117:170

15. EXPERIMENTAL TECHNIQUES OR RESULTS: SHOCK TUBES
Detonations of Starch Suspensions in Gaseous O_2/N_2 and Stoichiometric H_2/O_2 Mixtures, 117:477
Experimental Studies of Shock–Induced Ignition and Transition to Detonation in Ethylene and Propane Mixtures, 117:861
Shock–Tube and Modeling Study of Ethylene Pyrolysis and Oxidation, 117:755
Shock–Tube and Modeling Study of Methane Pyrolysis and Oxidation, 118:340

16. EXPERIMENTAL TECHNIQUES OR RESULTS: WELL STIRRED REACTORS
Chemistry of Pre-ignition of n-Pentane and 1-Pentene, The, 118:213
Oxidation of Neopentane in a Jet–Stirred Reactor from 1 to 10 ATM: An Experimental and Detailed Kinetic Modeling Study, 118:191

Reduction of NO by Ethylene in a Jet–Stirred Reactor at 1 Atm: Experimental and Kinetic Modelling, The, 119:494

17. FIRE OR EXPLOSION PHENOMENA, COMBUSTION SAFETY
Binary CF_3Br- and CHF_3-Inert Flame Suppressants: Effect ofTemperature on the Flame Inhibition Effectiveness of CF_3Br and CHF_3, 118:489
Combustion of Two–phase Hydrocarbon Fuel Clouds Released into the Atmosphere, 118:583
Coupled Dipole Calculation of Extinction Coefficient and Polarization Ratio for Smoke Agglomerates, 119:56
Experimental Study of Opposed Flow Flame Spread Over Wood Fiber/Thermoplastic Composite Materials, 118:317
Flame Dynamics in a Vented Vessel Connected to a Duct: 1. Mechanism of Vessel–Duct Interaction, 116:259
Flame Dynamics in a Vented Vessel Connected to a Duct: 2. Influence of Ignition Site, Membrane Rupture, and Turbulence, 116:272
Numerical Analysis of Laminar Combustion of Fuel Gas Clouds, 118:651
Scaling Laws of Turbulent Ceiling Fires, 116: 84
Solution to the Dusty Gas Explosion Problem with Reactant Consumption. Part I: The Adiabatic Case, 119:189
Studies of Premixed Flame Propagation in Explosion Tubes, 116:504
Study of the Chemical and Physical Processes Governing CO_2 Laser–Induced Pyrolysis and Combustion of RDX, A, 117:600
Three–dimensional Computation of Heat Transfer from Flames Between Verticle Parallel Walls, 117:574
Wind–Aided Flame Spread Under Oblique Forced Flow, 119:4

18. FLAME IGNITION OR STABILIZATION
Accounting for Reactant Consumption in the Thermal Explosion Problem. Part IV. Numerical Solution of the Arrhenius Problem, 117:422
Acoustic Effects During the Combustion of Gaseous Fuels in a Bubbling Fluidized Bed, 117:629
Characterization of Impinging Jet Flames, 116:671
Chemistry of Pre-ignition of n-Pentane and 1-Pentene, The, 118:213
Effect of Swirl on Lifted Flame Characteristics in Nonpremixed Jets, 117: 636
Effects of NO on the Ignition of Hydrogen and Hydrocarbons by Heated Counterflowing Air, 119:346
Experimental Studies of Shock–Induced Ignition and Transition to Detonation in Ethylene and Propane Mixtures, 117:861
Ignition and Extinction Fronts in Counterflowing Premixed Reactive Gases, 118:479
Ignition of Ethane, Propane, and Butane in Counterflow Jets of Cold Fuel versus Hot Air Under Variable Pressures, 117:777
Ignition of Fuel Mixtures by Standing Acoustic Waves, 118:370
Influence of a Catalytic Surface on the Gas–Phase Combustion of $H_2 + O_2$, The, 119: 144
Laser–Induced Ignition Using a Conical Cavity in CH_4–Air Mixtures, 119:473
Laser–Induced Spark Ignition of CH_4/Air Mixtures, 119:203
Observations on the Leading Edge in Lifted Flame Stabilization, 119:199
Premixture model of Turbulent Burning to Describe Lifted Jet Flames, The, 119:95
Shell Autoignition Model: A New Mathematical Formulation, The, 117:529
Structure of Triple Flames Stabilized on a Slot Burner, The, 119:23
Study of the Chemical and Physical Processes Governing CO_2 Laser–Induced Pyrolysis and Combustion of RDX, A, 117:600
Transition of Ignition Between Laminar Premixed and Nonpremixed Jets, 117:871

19. FLAME QUENCHING OR EXTINCTION
Absolute Concentration Measurements Using DFWN and Modeling of OH and S_2 in a Fuel–Rich H_2/Air/SO_2 Flame, 118:301
Combined Effects of Radiation, Flame Curvature, and Stretch on the Extinction and Bifurcations of Cylindrical CH_4/Air Premixed Flame, 116:580
Effect of Unsteady Stretch on Spark–Ignited Flame Kernel Survival, 118:469

Flame Extinction Limits in CH_2F_2/Air Mixtures, 118:25
Ignition and Extinction Fronts in Counterflowing Premixed Reactive Gases, 118:479
Instability–Induced Extinction of Diffusion Flames Established in the Stagnant Mixing Layer, 117:404
Study of the Chemical and Physical Processes Governing CO_2 Laser–Induced Pyrolysis and Combustion of RDX, A, 117:600

20. FLAMES: DIFFUSION
Analysis and Numerical Simulation of a Nonpremixed Flame in a Corner, 118:221
Assessment of Combustion Submodels for Turbulent Nonpremixed Hydrocarbon Flames, 116:519
Burke-Schumann Spray Diffusion Flame in a Nonuniform Flow Field, The, 118:13
Can Soot Primary Particle Size Be Determined Using Laser–Induced Incandescence?, 116:291
Characteristic Flow Modes of Wake-Stabilized Jet Flames in a Transverse Air Stream, 117:59
Chemical Response of Methane/Air Diffusion Flames to Unsteady Strain Rate, 118:204
Comment and Reply on the "Assessment of Combustion and Submodels for Turbulent Nonpremixed Hydrocarbon Flames," 116:675
Comparison of Mixing Model Performance for Nonpremixed Turbulent Reactive Flow, 117:732
Comparison of Non-Fuel Hydrocarbon Concentrations Measured in Coflowing Nonpremixed Flames Fueled with Small Hydrocarbons, 117:362
Comparison of Saturated and Linear Laser–Induced Fluorescence Measurements of Nitric Oxide in Counterflow Diffusion Flames, 117:810
Computational and Experimental Study of Soot Formation in a Coflow, Laminar Diffusion Flame, 117:117
Control of Soot Emission of a Turbulent Diffusion Flame by DC or AC Corona Discharges, 116:653
Control of Soot Emitted from Acetylene Diffusion Flames by Applying an Electric Field, 119:356
Differential Diffusion in Turbulent Reacting Flows, 117:4
Direct Numerical Simulation of Heat Release and NO_x Formation in Turbulent Nonpremixed Flames, 119:69
Effect of Global Equivalence Ratio and Postflame Temperature on the Composition of Emissions from Laminar Ethylene/Air Diffusion Flames, The, 118:521
Effect of Swirl on Lifted Flame Characteristics in Nonpremixed Jets, 117:636

Prediction of NO_x Control by Basic and Advanced Gas Reburning Using the Two–Stage Lagrangian Model, 119:483
Rate–Ratio Asymptotic Analysis of Methane—Air Diffusion–Flame Structure for Predicting Production of Oxides of Nitrogen, 117:441
Reactions of Sodium Species in the Promoted SNCR Process, 117:821
Reduction of NO by Ethylene in a Jet–Stirred Reactor at 1 Atm: Experimental and Kinetic Modelling, The, 119:494
Simplified, Fundamentally Based Method for Calculating NO_x Emissions in Lean Premixed Combustors, A, 119:367
Study of Pollutant Emission Characteristics of Partially Premixed Turbulent Jet Flames, A, 116:627

40. POLLUTANTS: OTHER
Experimental Study of the Inhibiting Effect of Chlorine in a Fluidized Bed Combustor, An, 116:640
Formation of Polycyclic Aromatic Hydrocarbons in an Atmospheric Pressure Ethylene Diffusion Flame, 118:500
Mechanisms for the Formation of Exhaust Hydrocarbons in a Single Cylinder Spark–Ignition Engine, Fueled with Deuterium–Labeled *ortho-, meta-* and *para-Xylene*, 118: 459
Morphology of Chromium Emissions from a Laminar Hydrogen Diffusion Flame, 116: 233
Paramagnetism of Soot Particles in Propane–Oxygen Flames, The, 118:741
Study of Pollutant Emission Characteristics of Partially Premixed Turbulent Jet Flames, A, 116:627
Volatile Organic Compounds and Particulates as Components of Diesel Engine Exhaust Gas, 118:179

41. PROPELLANTS: PYROTECHNICS AND EXPLOSIVES
Boron Particle Ignition and Combustion at 30–150 ATM, 117:32
Combustion Mechanism of an RDX–Based Composite Propellant, 118:248
Combustion of Ammonium Dinitramide, 117: 429
Elementary Discussion of Propellant Flame Geometry, An, 117:541
Multi-Phase Model for Ignition and Combustion of Boron Particles, 117:227
Phase Segregation Effects on the Calculation of ODTX in HMX Spheres, 117:657
Predicting Heats of Formation of Energetic Materials Using Quantum Mechanical Calculations, 118:445
Simultaneous Temperature and Species Measurements of the Glycidyl Azide Polymer (GAP) Propellant During Laser–Induced Decomposition, 117:244
Study of the Gas-Phase Chemical Structure During CO_2 Laser Assisted Combustion of HMX, A, 117:170
Thermal Decomposition Kinetics of PBAN–Binder and Composite Solid Rocket Propellants, 119:174
Thermal Decomposition of RDX/BAMO Pseudo-Propellants, 117:795

42. PYROLYSIS AND THERMAL DECOMPOSITION
Diamond Deposition in Low–Pressure Acetylene Flames: *In Situ* Temperature and Species Concentration Measurements by Laser Diagnostics and Molecular Beam Mass Spectrometry, 118:37
Large Molecules, Radicals, Ions, Small Soot Particles in Fuel–Rich Hydrocarbon Flames Part I: Positive Ions of Polycyclic Aromatic Hydrocarbons (PAH) in Low–Pressure Premixed Flames of Acetylene and Oxygen, 116:62
Shock–Tube and Modeling Study of Methane Pyrolysis and Oxidation, 118:340
Simulation of Soot Aggregates Formed by Benzene Pyrolysis, 117:851
Simultaneous Temperature and Species Measurements of the Glycidyl Azide Polymer (GAP) Propellant During Laser–Induced Decomposition, 117:244
Thermal Decomposition Kinetics of PBAN–Binder and Composite Solid Rocket Propellants, 119:174
Thermal Decomposition of RDX/BAMO Pseudo-Propellants, 117:795

43. RADIATION, SPECTRA AND EXCITED SPECIES
Combined Effects of Radiation, Flame Curvature, and Stretch on the Extinction and Bifurcations of Cylindrical CH_4/Air Premixed Flame, 116:580
Coupled Dipole Calculation of Extinction Coefficient and Polarization Ratio for Smoke Agglomerates, 119:56
Experimental and Numerical Study of Flame Ball IR and UV Emissions, 116:348
Nitric Oxide Formation in Dilute Hydrogen Jet Flames: Isolation of the Effects of Radiation and Turbulence–Chemistry Submodels, 117:4
Three–dimensional Computation of Heat Transfer from Flames Between Verticle Parallel Walls, 117:574
Two–Dimensional Large Eddy Simulation of Soot Formation in the Near–Field of a Strongly Radiating Nonpremixed Acetylene–Air Turbulent Jet Flame, 119:121

44. SMOLDERING AND LOW TEMPERATURE OXIDATION
Application of Ultrasonic Tomographic Imaging to Study Smoldering Combustion, An, 116:120
Space Shuttle Based Microgravity Smoldering Combustion Experiments, 116:398

45. THERMOCHEMISTRY AND THERMODYNAMICS
Heats of Formation of HNO and Some Related Species, 117:394
On the Competition Between Hydrogen Abstraction Versus C-O Bond Fission in Initiating Dimethyl Ether Combustion, 118:312
Predicting Heats of Formation of Energetic Materials Using Quantum Mechanical Calculations, 118:445

46. TRANSPORT OF HEAT AND MASS
Classification of Combustion Regimes in a Packed Bed of Particles Based on the Relevant Time and Length Scales, 116:297
Heat Flux from a Diffusion Flame Leading Edge to an Adjacent Surface, 118:651
Measurement of Mass Transfer Between the Bubble and Dense Phases in a Fluidized Bed Combustor, 116:105
